AT&T Guardicore
Fight cyberbreaches with microsegmentation
Prevent and contain lateral movement and malicious attacks by enforcing zero trust across your environment.

Visibility
Map application dependencies and flows down to the user and process levels on a real-time or historical basis.

Segmentation
Rather than relying on the underlying network or cloud infrastructure for segmentation, AT&T Guardicore creates a software-based segmentation overlay that works across data centers and cloud environments.

Breach detection
These segmentation capabilities are complemented by a sophisticated set of threat defense and breach detection capabilities, as well as threat hunting services.

Comprehensive protection at scale
Simplify security management across cloud, data centers, and physical assets with one platform.

Why AT&T
AT&T Cybersecurity makes it safer for your business to innovate through network resiliency. We help to design, deploy, and manage the secure network that you aspire to by proactively identifying areas of cyber risk and preventive measures to protect digital connections.
