

# A holistic approach to threat detection and response

As businesses digitally transform, security and operational complexities increase. Overburdened security teams are inundated with alerts and notifications from the multiple tools they manage and too often must take a purely reactive approach to security.

Companies are rapidly transforming the way they do business.

Global spending on digital transformation is expected to approach **\$6.8 trillion** by 2023<sup>1</sup>

More employees are working remotely than ever before.

**25%** of all professional jobs in North America will be remote by the end of 2022<sup>2</sup>

Cybercriminals are not slowing down and organizations of every size are being targeted.

Overall number of data compromises **up more than 68%** compared to 2021<sup>3</sup>

Along with flexibility and scalability, the adoption of cloud computing brings increased risk.

**50%** of respondents said their cloud environments had been breached in 2020 or 2021<sup>4</sup>

The remote work trend brings increased security challenges.

**69%** of organizations are most concerned about securing network access for remote workers<sup>5</sup>

Security is fragmented and siloed as security teams manage multiple tools that are not integrated.

**69%** of businesses view their company's approach to security as reactive and incident driven<sup>6</sup>

## XDR optimizes the security operations center

It gives security teams a faster and more efficient way to bring together data from a range of security tools and identify and respond to true threats.

One centralized view across the attack surface

Continually updated tactical threat intelligence

Collect and correlate data from multiple sources

Automation and orchestration for faster response times

## Many organizations do not have advanced threat detection and response capabilities

A managed security services provider can help organizations protect their business from threats 24/7.

Round-the-clock monitoring

Day-to-day management tasks

Deployment, tuning, configuration guidance

Threat hunting

Incident response
